

Platform or Rule	What Triggers It	Where It Lives	If You Skip It
Instagram, 31 August 2026	A profile centered on an AI-generated person	AI-generated profile label; enforcement appears in Account Status	Reach may be limited
TikTok, 10 July 2026	Realistic AIGC and detected provenance signals; separate classifiers target AI-spam accounts	Creator disclosure plus automatic Content Credentials and watermark labels	Labeling, spam enforcement, or removal under existing rules
YouTube	Realistic, meaningfully generated or altered media	Altered-content setting during upload; YouTube can add a label	Platform-added label; repeated nondisclosure can bring removal or Partner Program suspension
Snapchat, 31 July 2026	Wholly AI-generated Spotlight video; AI-enhanced work receives transparency indicators	Automatic transparency indicator on qualifying work	Wholly generated video is excluded from Spotlight recommendation
LinkedIn, 30 July 2026	No general AI disclosure rule in the cited posts; members can flag low-quality output	Three-dot feedback menu; enough feedback may appear privately in Post Analytics	Distribution can fall through a mix of quality signals
Pinterest, introduced 30 April 2025	Metadata or classifiers indicate an image was generated or modified with AI	“AI modified” label and user “see fewer” controls in selected categories	The label remains and user preferences can reduce exposure
Facebook labels, introduced 5 April 2024	Industry-standard signals or self-disclosure can trigger an AI information label; separate originality rules target duplicates and low-value transformations	“AI info” appears on generated media; edited-only labels can sit in the post menu	A label usually adds context; policy violations can remove content, while unoriginal work can lose recommendation or monetization eligibility
EU AI Act Article 50	Specified AI interactions, deepfakes, and generated or manipulated public-interest text	Machine-readable marking and clear disclosure where the Act requires it	Regulatory exposure, not a universal platform ban

AI pre-flight	1 / Owner Who owns the claim?	2 / Source Can the reviewer open it?	3 / Disclosure Would it expose deception?	4 / Context Did AI preserve what matters?	5 / Correction Can we catch the mistake first?
